

12-ReactJS-HOL

Create a React Application named “ticketbookingapp” :

```
import { useState } from "react";
import GuestPage from "./GuestPage";
import UserPage from "./UserPage";

function App() {
  const [isLoggedIn, setIsLoggedIn] = useState(false);

  // Handle Login
  const handleLogin = () => {
    setIsLoggedIn(true);
  };

  // Handle Logout
  const handleLogout = () => {
    setIsLoggedIn(false);
  };

  return (
    <div>
      { /* Navigation Header */ }
      <div
        style={{
          backgroundColor: "#1a5490",
          color: "white",
          padding: "15px 20px",
          display: "flex",
          justifyContent: "space-between",
          alignItems: "center",
          boxShadow: "0 2px 4px rgba(0,0,0,0.1)",
        }}
      >
```

```

<h1 style={{ margin: "0", fontSize: "24px" }}>
  ✈️ Flight Ticket Booking System
</h1>

<button
  onClick={isLoggedIn ? handleLogout : handleLogin}
  style={{
    padding: "10px 20px",
    fontSize: "14px",
    backgroundColor: isLoggedIn ? "#e74c3c" : "#27ae60",
    color: "white",
    border: "none",
    borderRadius: "5px",
    cursor: "pointer",
    fontWeight: "bold",
    transition: "background-color 0.3s",
  }}
  onMouseEnter={(e) => {
    e.target.style.backgroundColor = isLoggedIn ? "#c0392b" : "#229954";
  }}
  onMouseLeave={(e) => {
    e.target.style.backgroundColor = isLoggedIn ? "#e74c3c" : "#27ae60";
  }}
  >
  {isLoggedIn ? "🚪 Logout" : "🔒 Login"}
</button>
</div>

{/* Conditional Rendering - Based on Login State */}
{isLoggedIn ? <UserPage /> : <GuestPage />}
</div>

);}

export default App;

```

Output :
