

SQL Exercise Stored procedure

Exercise 4: Execute a Stored Procedure

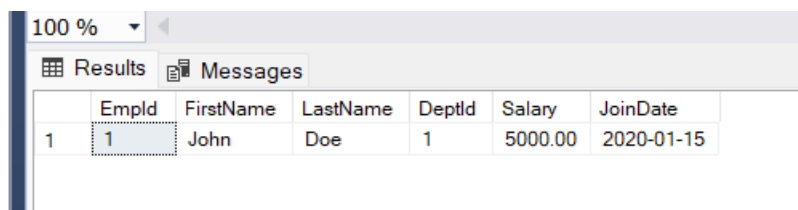

1. Write the SQL command to execute the stored procedure with a DepartmentID parameter -

```
CREATE PROCEDURE sp_GetEmpByDept
    @DeptId INT
AS
BEGIN
    SELECT * FROM Employees
        WHERE DeptId = @DeptId;
END;
```

2. Execute the command and review the results -

```
EXEC sp_GetEmpByDept @DeptId = 1;
```

Output :

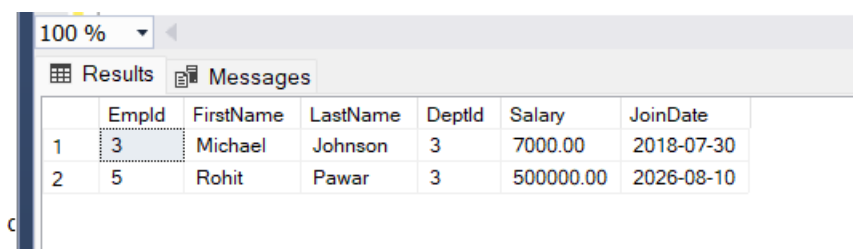

The screenshot shows a SQL Server Results window with a zoom level of 100%. The 'Results' tab is active, displaying a single row of data. The columns are EmpId, FirstName, LastName, DeptId, Salary, and JoinDate. The data row shows EmpId 1, John Doe, Department 1, Salary 5000.00, and JoinDate 2020-01-15.

	EmpId	FirstName	LastName	DeptId	Salary	JoinDate
1	1	John	Doe	1	5000.00	2020-01-15

```
EXEC sp_GetEmpByDept @DeptId = 3;
```

Output :

The screenshot shows a SQL Server Results window with a zoom level of 100%. The 'Results' tab is active, displaying two rows of data. The columns are EmpId, FirstName, LastName, DeptId, Salary, and JoinDate. The data rows show EmpId 3 (Michael Johnson) and EmpId 5 (Rohit Pawar), both in Department 3.

	EmpId	FirstName	LastName	DeptId	Salary	JoinDate
1	3	Michael	Johnson	3	7000.00	2018-07-30
2	5	Rohit	Pawar	3	500000.00	2026-08-10
