

SQL Exercise Stored Procedure

Exercise 5: Return Data from a Stored Procedure

Goal: Create a stored procedure that returns the total number of employees in a department –

```
CREATE PROCEDURE sp_GetEmpCountByDept
    @DeptId INT
AS
BEGIN
    SELECT COUNT(*) AS TotalEmployees FROM Employees
        WHERE DeptId = @DeptId;
END;
```

Execute the Stored Procedure :

```
EXEC sp_GetEmpCountByDept 1;
```

Output :

The screenshot shows a SQL Server Results window with a zoom level of 100%. It has two tabs: 'Results' and 'Messages'. The 'Results' tab is active, displaying a table with one column named 'TotalEmployees' and one row with the value '1'.

TotalEmployees
1

```
EXEC sp_GetEmpCountByDept 3;
```

Output :

The screenshot shows a SQL Server Results window with a zoom level of 100%. It has two tabs: 'Results' and 'Messages'. The 'Results' tab is active, displaying a table with one column named 'TotalEmployees' and one row with the value '2'.

TotalEmployees
2
