

3-ReactJS-HOL

Create a React project named “scorecalculatorapp” :

```
function CalculateScore({ name, school, total, goal }) {  
  const average = total / 4;  
  const status = average >= goal ? "Pass" : "Fail";  
  
  return (  
    <div className="score-card">  
      <h2>Student Score Report</h2>  
      <p><strong>Name:</strong> {name}</p>  
      <p><strong>School:</strong> {school}</p>  
      <p><strong>Total Marks:</strong> {total}</p>  
      <p><strong>Goal:</strong> {goal}</p>  
      <p><strong>Average Score:</strong> {average.toFixed(2)}</p>  
      <p><strong>Status:</strong> <span  
className={status.toLowerCase()}>{status}</span></p>  
    </div>  
  )  
}
```

export default CalculateScore

```
import CalculateScore from './Components/CalculateScore'
```

```
import './Stylesheets/mystyle.css'
```

```
function App() {
```

```
  return (
```

```
    <div>
```

```
      <h1 style={{ textAlign: 'center', color: '#2c3e50' }}>Student Score  
Calculator</h1>
```

```
      <CalculateScore
```

```
        name="John Doe"
```

```
        school="Oxford High School"
```

```
        total="320"
```

```
        goal="75"
```

```
      />
```

```
      <CalculateScore
```

```
        name="Jane Smith"
```

```
        school="Cambridge Academy"
```

```
        total="280"
```

```
        goal="70"
```

```
      />
```

```
      <CalculateScore
```

```
        name="Mike Johnson"
```

```
        school="Stanford Institute"
```

```
        total="360"
```

```
        goal="80"
```

```

    />
  </div>
)
}

```

export default App

Output :
