

9. ReactJS-HOL

Create a React Application named “cricketapp” :

```
import { useState } from "react";
import ListofPlayers from "./ListofPlayers";
import IndianPlayers from "./IndianPlayers";

function App() {
  // ES6: State using flag to toggle between components
  const [flag, setFlag] = useState(true);

  return (
    <div>
      { /* Toggle Button */ }
      <div
        style={{
          position: "sticky",
          top: 0,
          backgroundColor: "#333",
          padding: "15px",
          textAlign: "center",
          zIndex: 1000,
        }}
      >
        <button
          onClick={() => setFlag(true)}
          style={{
            padding: "10px 20px",
            margin: "0 10px",
          }}
        />
      </div>
    </div>
  )
}
```

```
    fontSize: "16px",
    backgroundColor: flag ? "#2980b9" : "#95a5a6",
    color: "white",
    border: "none",
    borderRadius: "5px",
    cursor: "pointer",
    fontWeight: "bold",
  }}
>
```

```
 List of Players
</button>
```

```
<button
  onClick={() => setFlag(false)}
  style={{
    padding: "10px 20px",
    margin: "0 10px",
    fontSize: "16px",
    backgroundColor: !flag ? "#27ae60" : "#95a5a6",
    color: "white",
    border: "none",
    borderRadius: "5px",
    cursor: "pointer",
    fontWeight: "bold",
  }}
>
```

```
  IN Indian Players
</button>
</div>
```

```

    { /* Display component based on flag */
    {flag ? <ListofPlayers /> : <IndianPlayers />}
</div>

);
}

```

export default App;

Output :
